AB The present invention provides for a nutritional composition in a dry powder form or a liquid drink form for optimizing muscle performance during exercise. The dry nutritional composition includes carbohydrate and protein at 2.5-4.2 parts carbohydrate to 1.0 part protein. One or more carbohydrates are sugars at 70.65-78.24% by weight of the dry composition wherein the carbohydrates are a mixture of high and low glycemic sugars. One or more proteins are present at 15.80-21.90% by weight of the dry composition. The dry nutritional composition further includes a first vitamin being vitamin C at 0.28-0.42% of the dry composition for use as an antioxidant for preventing free radical formation during exercise and a second vitamin being vitamin E at 0.28-0.42% of the dry composition for use as an antioxidant for preventing free radical formation during exercise. The dry nutritional composition also includes electrolytes for replenishing electrolytes lost during exercise and for facilitating intestinal reabsorption of fluid. Addnl., the dry nutritional composition includes the amino acid arginine at 0.24-0.35% by weight of the dry composition for further stimulating insulin during exercise.
